

Task

1. Create a Blog schema model with following fields :
title, body, createdAt, published, updatedAt.

▼ Solution

```
model Blog {  
  id          Int          @id @default(autoincrement())  
  published Boolean @default(false)  
  title       String       @db.VarChar(255)  
  body        String  
  createdAt   DateTime @default(now())  
  updatedAt   DateTime @updatedAt  
}
```

2. Sync schema file to database and generate client

▼ Solution

```
npx prisma migrate dev --name 'created blog model'  
npx prisma generate
```

3. Write a function that lets you insert data in Blog table.

▼ Solution

```
async function addBlog(title,body){  
  let newBlog= await prisma.blog.create({  
    data:{  
      title:title,  
      body:body  
    }  
  })  
  return newBlog;  
}
```

```
}
```

4. write a function to get all blogs from blog table

▼ Solution

```
async function getAllBlogs(){
  let allblogs= await prisma.blog.findMany({})
  return allblogs;
}
```

5. Write a function to get a blog given blogId

▼ Solution

```
async function getBlog(blogId){
  let blog= await prisma.blog.findUnique({
    where:{
      id:parseInt(blogId)
    }
  })
  return blog;
}
```

6. Write a function to update a blog title given blogId and update blog title

▼ Solution

```
function updateBlog(blogId, updatedBlogTitle){
  let updateBlog= await prisma.blog.update({
    where:{
      id:parseInt(BlogId)
    }
    data:{
      title: updatedBlogTitle
    }
  })
}
```

```
  })  
  return updateBlog;  
}
```

7. Write a function to delete a blog given blogId

▼ Solution

```
async function deleteBlog(blogId){  
  let deleteBlog= await prisma.blog.delete({  
    where:{  
      id:parseInt(blogId)  
    }  
  
  })  
  return deleteBlog;  
}
```
