

Relationships.

Prisma let's you define `relationships` to mapped tables with each other.

1. Types of relationships
 - one to one
 - one to many
 - many to one
 - many to many
2. For a blog application, there is one to many relationship

Update the prisma.schema file

```
model User {
  id      Int      @id @default(autoincrement())
  email    String   @unique
  name     String?
  createdAt DateTime @default(now())
  blogs    Blog[]

}

model Blog {
  id          Int      @id @default(autoincrement())
  published   Boolean   @default(false)
  title       String    @db.VarChar(255)
  body        String
  createdAt   DateTime @default(now())
  updatedAt   DateTime @updatedAt
  userId      Int
  user        User     @relation(fields: [userId], references: [id])
}
```

fields represent foreign key and references represent primary key

```
ALTER TABLE "Blog"  
ADD CONSTRAINT fk_blog_user  
FOREIGN KEY (userId) REFERENCES User(id)  
ON DELETE RESTRICT  
ON UPDATE CASCADE;
```

3. Sync the database and create clients

```
npx prisma migrate dev --name 'mapped user table with blog'  
npx prisma generate
```

 **Blog Functions.**
